

SCANNA 17 AND 18 HANDHELD METAL DETECTORS

The SCANNA 17 and SCANNA 18 are high sensitivity metal detectors and are claimed to be the most sensitive available. Both include a separate rocker switch facility which in the back position enables the SCANNA 17 / SCANNA 18 to perform as a first class personnel search detector and with the rocker switch in the forward (turbo) position converts the electronics into a super high sensitivity metal detector enabling the detection of very small pieces of metal previously undetectable. The SCANNA 17 has internal factory pre-set turbo level, ideal for a really rapid search for small targets whereas the SCANNA 18 has an external variable turbo control for programmable detection which is ideal for even smaller pieces. It is no longer necessary to have rechargeable batteries, due to new advanced technology we are able to reduce battery consumption to a level previously unattainable, thereby allowing up to 12 months daily operation from a single replaceable battery, greatly reducing operating costs and improving convenience.

SPECIFICATIONS

Simple Push-Button operation

Instant response to all metals

Auto ranging-automatically adjusts for optimum performance for any target size

Clear audible signal (digital go-no go) combined with visual L.E.D.

Fully automatic self-adjusting circuits

Battery inserted "cartridge style" (spring loading with Beryllium copper contacts - no wires or connections.

Standard 9V battery

All weather use-working temperature -20 +65C

Ultra high reliability electronics. Rugged construction high impact resistant case.

Supplied complete with Battery - ready for use

1 year warranty

On/ Off minimal pressure push button switch, has a lifetime warranty

2 position switch for Normal / Turbo

Dimensions: L 360mm, W 10.5mm (probe), H 55m

Weight: 280 grams (9.60 ozs)
