

SCANMAIL10K

MAILSCREENER

Overview

The Scanna **SCANMAIL 10K** is the world's number one mailscreener and letterbomb detector, tried and trusted by over 10,000 users across the globe.

SCANMAIL 10K uses no radiation and can quickly screen handfuls of mail or small packages with ease. It instantly sounds visual and audible alarms when a suspect package containing threats such as razor blades or an IED passes through its detection zone.

SCANMAIL automatically and reliably detects common mail bomb components, such as detonators, power sources, and circuitry, regardless of the type of explosive used.

Its discrimination technology allows typical metallic stationery items such as paperclips and staples to pass through without signalling an alarm, thus ensuring there is no disruption nor delay to daily mailroom procedures.

Technical Information

Parameter	Specification
Power Supply	Switchable 110/220V, 50/60 Hz
Integral Battery	12V nominal DC, internally fused 4.0A
Back-Up Operation	Integral battery with automatic recharge supplies approximately 3 hours operating power if mains power is unavailable. Incorporates back-up circuitry which can be switched on in the unlikely event of unit malfunction. All circuitry is modular to facilitate service and module exchange.
Weight	8 kgs [17.6 lbs]
Dimensions	43 cm [16.9"] x 42 cm [16.5"] x 22 cm [9"]

BENEFITS AND FEATURES

Highlighted Features

Fast and Reliable.

Quickly screens bundles of mail and parcels up to 2.5" [6cm] thick - the opening of a standard postbox.

Instant Verification.

Alerts instantly when potentially harmful items of mail i.e. mail bombs and their components [such as batteries or detonators], razor blades or weapons are detected, providing both audible and visual alarms.

Intelligent Discrimination.

Ignores completely harmless stationery items such as paperclips and staples thus avoiding disruption to normal business and mail handling procedures.

Safe and Easy to Use.

Ready to operate straight from the shipping carton. Requires no calibration, set-up or operator training. Emits no radiation and will not damage camera film, magnetic tape nor computer discs.

Back Up Circuitry.

Incorporates back-up circuitry that takes over in the event of a malfunction, to provide uninterrupted mailscreening.

Portable.

Weights just 8 kgs [17 lbs]. Can be moved to reception areas for spot checks on hand delivered items and courier deliveries. An integral battery can be used when mains power is not available.
