

FLEXRAY

LARGE FORMAT X-RAY IMAGE PLATE KIT

Longer Image Plates

Long plates to inspect larger areas in a single x-ray shot

Using longer length digital x-ray image plates gives you the ability to examine large objects or surface areas in a single x-ray shot, reducing your returns to the target area and ultimately your time on task. Multiple plates can be fixed together in a variety of formations using the Flexray image plate mounting kit then stitched into a single large image using the Scanview x-ray imaging software. Lead plate markers are provided for ensuring correct orientation of plates.

Range of Sizes

The larger size image plates are available in standard sizes 35 cm x 90 cm; 35 cm x 130 cm. Other custom 35 cm x longer length upon request.

Flexray Image Plate Mounts

Multi-Configuration Plate Holder Kit

Longer plates can be used in multiples with the Flexray image plate mounting kit. The Flexray kit can fix two or more plates together in a variety of different configurations depending on the size of the area needing investigation and the specifics of the task. Flexray image plate kits include velcro fastenings, guy ropes, eyelet and suction cups giving you the flexibility to freestand or hang your image plates behind the target or to directly attach them to the area of interest.

Easy upgrade to your existing CR X-ray System

The large format x-ray image plates are compatible with Scanview software on your CR35 or ScanX Scout CR X-ray System.

Applications

- Wall examination/building protection
- Vehicle Panel Inspection for hidden contraband
- Fuel tank inspection
- Pipe inspection
- Large suitcase or parcel investigation
- Large UXO inspection
- Weapons Exploitation.
